A personal note	x
Preface	xi
Acknowledgements	xiii
Notation	xiv
Introduction	xvi
Who is this book for?	xvi
Some characteristics of this book	xvi
Contents	xvii
Mode of study	xxii
Suggestions for study	xxiii
A final comment	xxiii
Chapter 1 An introduction to resource and environmental economics	1
Introduction	1
Natural and environmental resources	1
Classifications of environmental resources	3
The emergence of resource and environmental economics	4
Associated developments in the environmental and natural sciences	9
Environmental-augmented input–output models	13
Systems analysis	14
Ecological science developments	15
Fundamental elements of the economic approach to resource and environmental issues	17
Conclusions: what are the distinguishing characteristics of the new environmental economics?	20
Discussion questions	22
Problems	22
Further reading	23

Chapter 2	Ethics, discounting the future, and the environment	24
	Introduction	24
	Part 1 Ethical foundations for environmental economics	25
	Naturalist moral philosophies	25
	Humanist moral philosophies	27
	Utilitarianism	27
	Part 2 Utilitarianism and discounting	37
	Utility discount rate and consumption discount rate	37
	The consequences of discounting	38
	Relationship between the utility and consumption discount rates	38
	What numerical values should be selected for the utility and consumption discount rates?	39
	Discounting over very long periods	41
	Part 3 Cost–benefit analysis	42
	Principles of cost–benefit analysis	42
	Cost–benefit analysis in practice	45
	Discounting as questions of efficiency and of intergenerational distribution and equity	46
	Discussion questions	46
	Problems	47
	Further reading	48
	Appendix 1	49
	Appendix 2	49
Chapter 3	Sustainability and sustainable development	51
	Introduction	51
	Reasons for concern about sustainability	53
	Definitions and meanings of sustainability	56
	Attaining sustainable economic behaviour	63
	Irreversibility and sustainability	71
	Case study: Sustainable development: the case of the Netherlands	72
	Discussion questions	77
	Problems	77
	Further reading	77
	Appendix 1	78
Chapter 4	Welfare economics and the environment	79
	Part 1 Welfare economics: efficiency, optimality and market failure	79
	Introduction	79
	Environmental resources: scarcity and choice	79
	Economic efficiency: the efficient allocation of resources	80
	Static economic efficiency	81

The non-uniqueness of efficient allocations	84
The social welfare function and optimality	85
Intertemporal economic efficiency	86
The intertemporal social welfare function and an intertemporally optimal resource allocation	89
Achieving an efficient allocation in a market economy	90
The welfare-optimal allocation and a market economy	92
Part 2 Market failure and public policy: externalities and public goods	93
Introduction: efficiency, welfare and the environment	93
Environmental resources and the existence of markets	94
Environmental resources and market structures	94
Externalities	95
Public goods	101
Property rights, common property resources and environmental resources	104
Imperfect information, risk and uncertainty and irreversibilities	105
Government policy, government failure and market failure	106
Case study: Pollution in the Central European ex-planned economies	107
Discussion questions	111
Problems	111
Further reading	111
Appendix 1	111
Appendix 2	113
Chapter 5 The efficient and optimal use of environmental resources	116
Introduction	116
Part 1 A simple optimal resource depletion model	116
The economy and its production function	116
The social welfare function and an optimal allocation of environmental resources	124
Part 2 Extending the simple optimal depletion model	127
Extraction costs	128
Damage arising from the extraction and use of the non-renewable resource	129
Generalisation to renewable resources	131
Complications	132
Does the exhaustibility of resources pose an economic problem?	133
A numerical application: oil extraction and global optimal consumption	134
Discussion questions	137
Problems	138

Further reading	138
Appendix 1	138
Appendix 2	139
Appendix 3	141
Chapter 6 The theory of optimal resource extraction: non-renewable (exhaustible) resources	143
Introduction: the extraction of exhaustible resources	143
A fixed stock non-renewable resource: two-period model	144
A fixed stock non-renewable resource: multi-period model	148
Exhaustible resource extraction in perfectly competitive markets	151
Resource extraction in a monopolistic market	153
A comparison of competitive and monopolistic extraction programmes	153
Extensions of the multi-period model of exhaustible resource depletion	154
The introduction of taxation/subsidies	159
The resource depletion model – some extensions and further issues	160
Natural resource scarcity	161
Discussion questions	163
Problems	163
Further reading	164
Appendix 1	164
Appendix 2	165
Appendix 3	165
Appendix 4	166
Appendix 5	166
Chapter 7 The theory of optimal resource extraction: renewable resources	168
Renewable resources: an introduction	168
Biological growth processes for renewable resources	169
The economics of harvesting a renewable resource	170
Harvesting a renewable resource under open access conditions	173
Private property equilibrium	175
The dynamics of resource harvesting	176
Open access revisited and the extinction of species	180
Socially optimal resource harvesting	182
Harvesting by a monopolist owner	182
Renewable resources policy	183
A safe minimum standard of conservation	186
The economics of forestry	187
Discussion questions	192

	Problems	193
	Further reading	193
	Appendix 1	193
	Appendix 2	194
	Appendix 3	195
	Appendix 4	195
Chapter 8	The economics of pollution	198
	Pollution: physical and economic meanings	198
	Pollution and the depletion of the quality or quantity of environmental resources	198
	Classification of forms of pollution	199
	The efficient level of pollution	200
	The efficient level of flow pollution	201
	Stock pollution	204
	Convexity and non-convexity in damage and abatement cost functions	208
	Further issues in the economics of pollution	212
	Discussion questions	213
	Problems	213
	Further reading	213
	Appendix 1	214
	Appendix 2	214
Chapter 9	Pollution control policy	216
	Pollution and economic policy	216
	Bargaining and the work of Ronald Coase	217
	Economically efficient pollution abatement programmes and cost-effective pollution abatement programmes	220
	Alternative instruments for achieving pollution abatement targets	223
	Command-and-control and market instruments: a comparison	235
	The consequences of uncertainty for the design of pollution control programmes	240
	Non-uniformly mixed (surface) pollutants	242
	Stock pollution	246
	Some final considerations	248
	Discussion questions	249
	Problems	249
	Further reading	250
Chapter 10	The valuation of environmental resources	251
	Introduction	251
	Dimensions of value	251

	The economic valuation of environmental resource stocks and flows	252
	Techniques for evaluating environmental resources	262
	Obtaining an aggregate social valuation from individual valuations	272
	Irreversibility, option value and quasi-option value	272
	Potential difficulties in environmental resource evaluation	278
	Discussion questions	278
	Problems	278
	Further reading	279
	Appendix 1	279
Chapter 11	Population growth, economic growth, and the natural environment	282
	Introduction	282
	Perspectives on population growth	283
	World population: an historical survey	283
	Population dynamics	287
	The economic theory of fertility and the economics of population control	289
	Population, agriculture and the availability of food	292
	Population growth and the natural environment	294
	Economic growth and the natural environment	296
	Case study: Pesticide and herbicide use in developing countries	305
	Discussion questions	307
	Problems	307
	Further reading	307
Chapter 12	International and global environmental pollution problems	309
	Introduction	309
	Regional and global environmental pollution problems: climate change, ozone depletion and acid rain	310
	Geographical distribution of costs and benefits of pollution control	312
	Game theory analysis	313
	International coordination of policy	318
	Decision making and uncertainty	319
	Case study 1: Acid rain pollution	319
	Case study 2: Stratospheric ozone depletion	328
	Case study 3: The economics of the Greenhouse Effect	332
	Discussion questions	344
	Problems	344
	Further reading	344
	Appendix 1	345

Chapter 13	Environmental input–output modelling	347
	Introduction	347
	The basic input–output model	348
	An environmental input–output framework	350
	Cost and prices	354
	Computable general equilibrium models	358
	A simple worked example of an input–output model	360
	Discussion questions	360
	Problems	360
	Further reading	361
Chapter 14	Accounting for the environment	362
	Introduction	362
	Environmental accounts and environmental indicators	363
	Integrating economic and environmental accounts	367
	A satellite system for integrated environmental and economic accounting	372
	Environmental accounting at the firm level	376
	Discussion questions	377
	Problems	377
	Further reading	377
	References	378
	Name Index	389
	Subject Index	392
